

Creekside HOA Solar Guidelines

The Board adopts these guidelines to promote the use of solar energy for heating and cooling and to ensure uniform installation and design of solar energy systems."

1. Homeowners should first consider all existing structures and landscaping before selecting a site for any proposed solar system.
2. All plans must be preapproved by the Architectural Review Committee (ARC) prior to installation.
3. Preferred location of solar panels is either a ground-mounted array (on the side or rear of the house) or a rear facing roof-mounted array. Flush-mounted panels (i.e. – the plane of the array is parallel to the roof) on a roof facing a street will be allowed if documentation is provided from the solar contractor indicating this is the only feasible location for a solar array. If panels are installed on a side or rear roof, the array may be tilted or raised if a variance is granted.
4. All components of the solar system should be integrated into the design of the home. The color of the solar system components should generally conform to the color of the roof shingles to the extent practical. Solar “shingles” that mimic the look of a composite shingle are acceptable but should match the color of the current roof shingles as much as practical.
5. Pursuant to ORS 447.065, the installation of all solar heating and cooling systems shall only be done by a licensed installer or journeyman plumber. Applications submitted to the ARC should include the following:
 - a. A diagram “Drawn to scale” by the licensed contractor installing the system showing where the system will be installed;
 - b. Photos of the roof area where the array will be mounted;
 - c. Material to be used and/or manufacture’s description of system, photos/pictures of system and color of system.
 - d. Where possible, provide photos of similar existing systems as examples.
6. Piping and electrical connections will be located directly under and/or within the perimeter of the panels when possible and as inconspicuously as possible from all angles.
7. The highest point of a solar panel array will be lower than the ridge of the roof where it is attached.
8. All painted surfaces will be kept in good repair.

Creekside HOA Solar Guidelines

9. Homes that abut any portion of the Golf Course may install solar systems at their own risk subject to the limitations set forth herein. Creekside HOA has no responsibility or liability for damage done to solar systems by errant golf shots. (ARTICLE VII – Section 5: Assumption of Risk- of the GOLF COURSE ESTATES AT CREEKSIDE CC&R's.
10. Changes to adjacent property should not impede an existing or soon to be installed solar system or interfere with any existing solar energy easement. (ORS 105.880 – 105.895 et al)

A variance to certain sections of these guidelines may be granted if compliance with these guidelines would significantly increase the purchase price of the solar system or significantly decrease its performance or efficiency. If a homeowner seeks a variance they must provide a minimum of two bids depicting the cost of installation of the solar systems – one bid in compliance with these guidelines and a second bid depicting the desired alternative location unless the variance represents the only feasible installation location. The ARC may require bids or estimates from a second contractor in order to make an informed decision.
